## STEALTH FLIP FINS

Military - Water Rescue - Search & Rescue - Helicopter Operations

Omega Flip Fins founder, an experienced veteran of the Special Forces, recognized the need for a fin that was maneuverable both in and out of the water to eliminate the risk of military divers drifting away as they attempted to put on fins in the water while fully loaded with scuba gear and weapons. Now, after many years in development, Stealth® and Stealth Max® Flip Fins are used by Military, Navy, Special Forces and Rescue Divers in the US and around the world.

Flip Fins® are uniquely designed to be strapped on prior to entering the water and removed after exiting. The two-piece fin is brought together by the Aqua-Hinge™, which features heavy-duty, military grade stainless steel springs, allowing the blades to fold up out of the way assuring full mobility out of the water and click down with a first kick once in the water.
